Shijiazhuang Senyinleng Trade Co., Ltd is a professional enterprise, intergrating produce and sell of WPC products. It is set up by Hebei RunEr Wood Plastic Tech.Co.,Ltd, Shijiazhuang Zeyi Wood Industry Co.,Ltd, Handan Sunbird Wood industy Co.,Ltd , Hebei Shangqiao Biotechnology Co.,Ltd and Shijiazhuang Yamei Stone Materials Co.,Ltd . It is in charge of the exporting of the products from the 5 members.

The main products for Senyinleng is Wood Plastic Compound Products (WPC Products), Including WPC Interior Door, Wall Panel, and Floor for bathroom and outside. WPC is a new green materials with no form-aldehyde. It has the character and appearance of Solid wood but better than wood in anti-moisture and anti-mothproof. It is easy to be mould as plastic but more strong and fire-proof and high-temperature than plastic. Meanwhile the waste materials can be 100% recycle use and it can reduce the waste and pollution to the environment.

The products from Senyinleng has been exported to Europe, America and Sub-America , Mid east, Australia and some other countries in the world. Senyinleng want to set up a long-term cooperation business relation with customers from all over the world by High-Quality products and better-quality service. Appreciate for the inquiry from the customer abroad and domestic.

Glass Door Profile Options

UV-resistant, no radiation damage, antibacterial, does not contain formaldehyde, nitrogen, benzene and other harmful substances, complies with national environmental standards of the People's Republic of China, non-toxic, no smell after installation.

flame retardant, B1 level for fire proofing, high waterproof, impact resistance, no crack features, using at ease

using natural wood powder mixed with the natural resin, molding, under high temperature, waterproof, moisture proof, moth resistance, resistance to acid and alkali.

product no juncture, an integrated whole.

provide product customization service for each big enterprise, group, and individual users, also can manufacture according to your requirements.

- ① WPC DOOR SHEET RAW MATERIAL
- ② DOOR SANDING MACHINE
- ③ PROFILE SANDING MACHINE
- ④ AUTO CARVING MACHINE
- ⑤ MAKING HOLES FOR HINGES AND LOCK PLACE.
- ⑥ UV AUTO PAINTING LINE
- ⑦ DUST-FREE PU AUTO FINISH COATING PAINTING LINE.
- ⑧ DUST FREE ROOM
- ⑨ SHOW ROOM

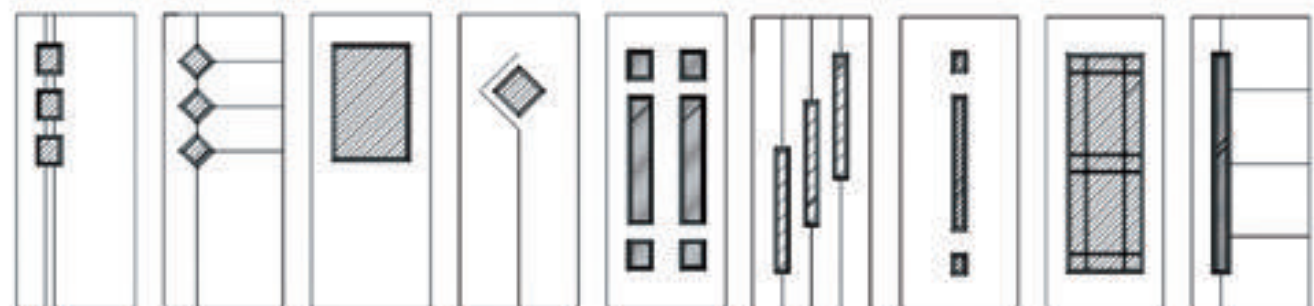

WPC Door is our main project. we can make Raw Material Door and Painting Finished Door. The door leaf thickness is 45mm. the designed wall thickness is 5mm and 8mm, we can do carving on the surface. Now we have sanding machine, carving machine, automatic painting machine and so on to make white and light yellow Finished WPC Door. We have four molds m-600. m-700m-800 m-900 and we can also make sizes:650mm. 750mm. 850mm. By the way, we can make other sizes according to your requirements drawings and opened mould.

Wood plastic composite (WPC) is a composite of highly refined bio-fiber and polymer resins (HDPE). WPC enjoys some of the best qualities of wood and plastic. It looks like natural wood, but with much higher endurance and performance.

To ensure the excellent quality and safety, we insist to use HDPE plus dried bio-fiber with safe high quality chemical additives.

People can benefit from WPC by following attributes:

Natural wood look Low maintenance long lifespan concealed fixings

Water resistant slip resistant mould resistant UV/color stability

SPECIFICATION

SPECIFICATION	1220mm×2440mm; 1560×3050 (Length&width) We can produce according to customer requirements.
THICKNESS	1mm-20mm
COLOR	White Red Yellow Blue Black Gray Green

PRODUCT FEATURES

PVC foam board is a new type of green environmental protection materials, it can substitute wood, aluminum, plastic composites.

PVC foam board has a very good sound insulation, heat insulation, heat-absorbing and fire characteristics.

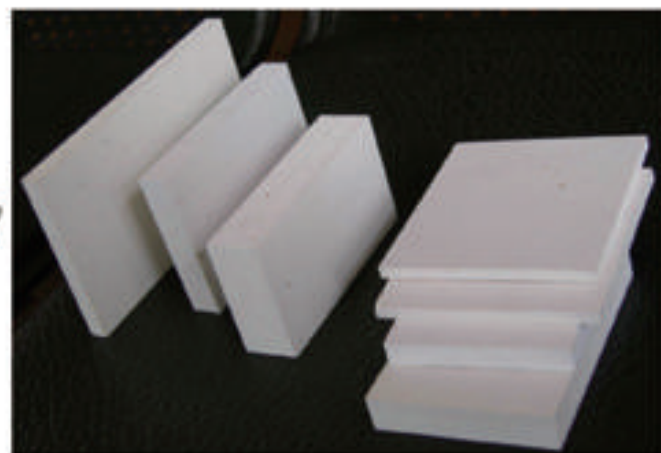

PVC foam board with moisture, mold, non-absorbent properties, shock-proof effect.

PVC foam board, using import pigments and auxiliaries, color will never change, difficult to aging, light texture, good toughness.

PVC foam board with wood characteristics, high hardness, stable performance, can be sawn, planed, nailed, viscosity and other processing.

PVC foam board can be used for hot forming, heat bending and folding processing flame retardant fire resistance, high insulation.

The surface of pvc foam board is smooth can be used to screen printing, chemical corrosion-resistant.

APPLICATION

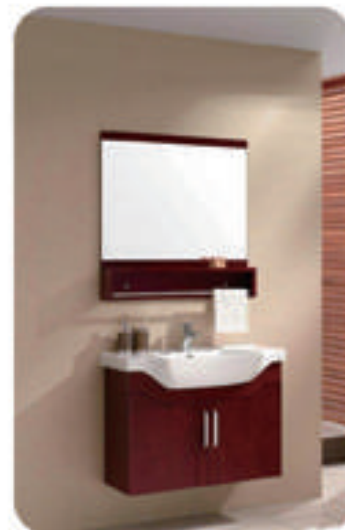

Advertising industry:
screen printing, engraving, advertising signs, sign boards used.

Furniture industry:
bathroom furniture, all kinds of high-grade furniture board.

Building decoration industry:
building wall panels, interior decorative panels, residential, offices, public places, buildings furrow.

Transportation:
boats, planes, buses, train cars, roof, box core with interior panels.

Industrial applications:
chemical anti-corrosion engineering, thermal molding pieces with cold plate, green with panels, water-resistant board used.

PVC

CHARACTERISTIC

Wood-Plastic Composites (WPC) is a new type of composite material arise in recent year.

1\WPC with wood and plastic composite functions. Has the similar processing performance with wood ,it can be sawn ,nailed planed and so on. can finished by wood working instruments.The Unmatched grip is better than other synthetic materials,and the mechanical performance is superior to wood.The Unmatched grip is generally three time the normal wood and five times the particleboard.

2\Has good elastic modulus and the mechanical properties,such as the compressive and flexural. Its durability is better than wood materials. The surface hardness is 2-5 times than wood,WPC and it products compared with wood ,it's against acid and alkaline ,waterproof ,corrosion resistance ,not multiply bacteria , Sound insulation and heat insulation, durable in use up to 50 years.

3\By additives,plastics can polymerize foaming,curing and other changes,not only can change the density, strength of wood material and other characteristics ,but also to anti-static, flame retardant and other special requirements. The WPC has the features with UV light stability and good colour.

4\The biggest advantage is turning waste into treasure ,can be recycled 100% and reproduction ,can decompose, non-pollution ,is the green environment friendly product..

APPLICATION

The WPC mainly used for building materials ,furniture, logistics packaging,display and other industries .It is the ideal materials for furniture industry and indoor decoration and building industry ,it's widely used in decorative board, exterior board,interior wall,indoor flooring board, bathroom board,partition board, sound insulating board, fence ,signs and WPC tray etc.

CHARACTERISTIC

AEP,as a new type of building material with an integration of heat preservation,fire-proofing and decoration ,is compromised by two metal skin on front side and back side as the decorative surfaces, and a specialized foaming material as the middle core layer. The metal skin on both side adopt the non-combustible aluminum sheets with PVDF coating ,in a stable and durable coating properties, providing a perfect weather resistance and excellent decorative effect ,and meeting the anti-fire and safety standard for the building regulations.The middle core layer is a foaming material invented independently,with the outstanding characteristics of low weight ,non-flammability,low thermal conductivity low water adsorption, non-flammability,low thermal conductivity, low water adsorption ,non-toxic high temperature resistance .By authoritative testing ,the material meets the national standard of B1 fire proof class,with excellent warm preservation and heat resistance.

APPLICATION

The AEP mainly used for buildings require the warm preservation in winter or heat insulation in summer External wall ,such as residential buildings ,hotels,commercial buildings, hospital ,Redecoration of old buildings, internal wall of the metro of airport. Advertisement boards,signage boards, display platforms, Factory wall cladding ,car body or boat indoor decoration ,lobby, ceiling ,bathroom ,kitchen Partition ,balcony ,furniture.
